

Pry Breaching Door

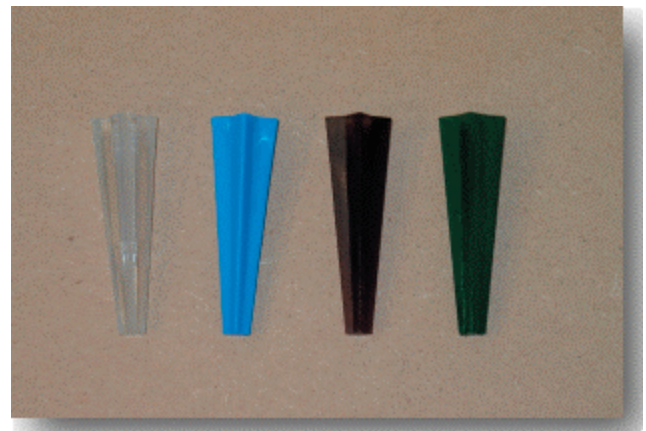

The BTI *Pry Breaching Door* offers realistic and affordable training for situations that involve outward opening doors. The *Pry Breaching Door* can be installed into a structure or utilized with the optional *Free Standing Kit*. Up to 3 lock sets can be simulated utilizing the patented system replicating either *Wood* or *Metal* door/frame construction methods. This results in a total of 6 construction and lock set scenarios. This system utilizes a low cost and easily fabricated wood insert to accept the Halligan or similar tool. This allows both training in setting the tool as well as replicated prying forces. This door can be reset in a matter of seconds, resulting in no training down time. The door comes complete with mounting lugs for securing into structures. The BTI *Pry Breaching Door* is highly cost effective when compared to the use of actual doors and jury rigged systems.

- 1-Year manufacturers warranty.
- Virtually indestructible 16ga steel skin for longevity and damage tolerance.
- Standard one-year materials and workmanship warranty.
- Provisions for mounting into structures of opportunity or live-fire houses.
- A cost effective training tool for outward opening doors.
- Can be used with optional *Free Standing Kit* for versatility.
- Utilizes a low cost wood insert that can be purchased or consumer fabricated.
- Inserts typically last from 5 to 15 breaches.

BTI *Breaching Pins* are for use in all of BTI *Breaching Door Products*. These patented engineered pins replicate the forces normally encountered in *Real World* breaching operations. Based upon the physical testing of actual doors, BTI has developed 4 types of breaching pins representing: *Wood*, *Metal*, and reinforced *door/frame* construction types (Clear, Blue, and Red). One to 3 pins are utilized during each breach depending on the number of lock sets simulated. A fourth pin type (Green), is specifically designed for use in the BTI *Explosive Breaching Door*. Although available, reinforced pins are not recommended for use with the BTI *Pry Breaching Door* system.
